

INTRODUCTION · EXAM STRATEGY - ALL DOMAINS

AWS Certified Cloud Practitioner

CLF-C02. Original scenarios, sourced from current AWS documentation.

EXAM CLF-C02 QUESTIONS 65 in 90 min PASS 700 of 1000

This exam does not test whether you can **recall** AWS services. It tests whether you can **choose between** four that all sound right.

The exam, in numbers

- ◆ **65 questions, 90 minutes.** Fifty are scored. Fifteen are unscored trial questions, and they are not marked.
- ◆ **700 out of 1000 to pass.** Scaled scoring, so this is not a straight percentage.
- ◆ Two formats: multiple choice with one answer, and multiple response with two or more correct out of five or more options.
- ◆ No penalty for guessing. An unanswered question scores exactly the same as a wrong one.
- ◆ Compensatory scoring. You do not need to pass each domain, only the exam overall.

ON THE EXAM

Never leave a question blank. There is no negative marking, so a guess is free.

The four domains and what they are worth

DOMAIN	WEIGHT	WHAT IT REALLY ASKS
Cloud Concepts	24%	Why cloud, Well-Architected, migration, economics
Security and Compliance	30%	Who is responsible, who can do what, which tool finds it
Cloud Technology and Services	34%	Which service for this job
Billing, Pricing and Support	12%	Which purchase option, which cost tool, which support plan

ON THE EXAM

Security is the largest single conceptual domain and it is the one most people under-prepare.

Where this course came from

- ◆ **A bank of 918 real-style practice questions** was analysed to find which decisions the exam tests, and how often.
- ◆ None of those questions appear in this course. Not one, not reworded.
- ◆ Every scenario here is original, written around the decisions the analysis surfaced.
- ◆ Every explanation is checked against current AWS documentation and the published exam guide.
- ◆ The question bank set the emphasis. The official exam guide set the structure.

ON THE EXAM

Memorising a leaked question bank teaches recognition of those questions. It does not teach the decision underneath.

Several answers the exam still marks correct describe services you **can no longer buy.**

What has changed under the exam

THING	WHAT ACTUALLY HAPPENED
AWS Snow Family	Closed to new customers Nov 2025. Snowball support ends 31 Dec 2026.
Amazon QuickSight	Renamed Amazon Quick Suite in Oct 2025, then shortened to Amazon Quick.
Support plan names	Developer, Business and Enterprise On-Ramp all retire 1 Jan 2027.
Amazon CodeCatalyst	Closed to new customers 7 Nov 2025, and not on the in-scope list.
AWS CodeCommit	Closed to new customers 25 Jul 2024. Off the in-scope list.
Amazon SageMaker	Now Amazon SageMaker AI in the exam guide.

ON THE EXAM

Module 22 covers all of these properly. Study the documented answer. Know the reality.

The twenty-seven modules

SECTION	MODULES	RUNTIME
Introduction	00	8 min
Domain 1 - Cloud Concepts	01 to 04	50 min
Domain 2 - Security and Compliance	05 to 09	84 min
Domain 3 - Cloud Technology and Services	10 to 17	142 min
Domain 4 - Billing, Pricing and Support	18 to 20	44 min
Confusion pairs, changes, exam technique	21 to 23	33 min
Three practice exams, sixty questions	24 to 26	77 min

ON THE EXAM

Roughly seven and a quarter hours. Modules are sized by what the exam tests, so they are not equal lengths.

How to use this course

01

Watch in order

Later modules assume earlier vocabulary. Do not skip ahead to the services.

02

Actually pause

Every scenario stops. Commit to an answer out loud before the walkthrough.

03

Take exam one

After the teaching modules. Score it by domain, not just total.

04

Rewatch the weak domain only

Only that one. Then take exam two.

05

Space out exam three

Leave several days. Recall after a gap is the thing that predicts a pass.

ON THE EXAM

Revising what you already know feels productive because the scores stay high. It moves nothing.

The conventions used throughout

- ◆ **The amber bar at the bottom** is the exam takeaway, not a summary. If you note one line per slide, note that one.
- ◆ **The marker on the left edge** is segmented by domain weight. The lit segment is where you are.
- ◆ Green points are things that are true or advisable.
- ◆ Red points are anti-patterns, traps, or plain wrong answers.
- ◆ **Tiebreaker slides** compare two services people confuse and state the word that separates them.

ON THE EXAM

Wrong answers get explained too. Knowing why a distractor is wrong generalises. Knowing the right answer does not.

Six months of exposure. **No coding, no architecture, no troubleshooting.**

What good preparation looks like

- ◆ Being able to say in one sentence what each in-scope service is for.
- ◆ Being able to name the difference between two services that sound alike.
- ◆ Recognising qualifier words. MOST cost-effective and LEAST operational overhead point at different answers.
- ◆ Memorising instance families, port numbers, or exact pricing. None of that is tested.
- ◆ Grinding a question bank until you recognise the questions rather than the reasoning.

ON THE EXAM

If you can explain a service to a colleague in one sentence, you know it well enough for this exam.
