INTRODUCTION · EXAM STRATEGY - ALL SECTIONS

Generative AI Leader: the complete course

What the exam tests, how this course is built, the thirty-three modules, and the study route that gets you through.

COVERS The whole course QUESTIONS 246 original RUNTIME About 8 hours

admin@sthithapragna.com

A business exam about generative AI. It tests choosing well, not building.

admin@sthithapragna.com

The exam at a glance

	DETAIL
Length	90 minutes
Questions	50 to 60, multiple choice
Fee	USD 99, plus tax
Languages	English, Japanese, Spanish, Portuguese
Delivery	Online or at a test centre, proctored
Valid for	3 years; no prerequisites
Pass mark	Not published by Google

CURRENCY CHECK

Facts checked on Google's exam page in October 2026. Check it again before you book.

Four sections, four weights

SECTION	WHERE IT IS TAUGHT
1 Fundamentals of gen AI (~30%)	Modules 02 to 09
2 Google Cloud's gen AI offerings (~35%)	Modules 10 to 18
3 Techniques to improve model output (~20%)	Modules 19 to 23
4 Business strategies for gen AI (~15%)	Modules 24 to 27

ON THE EXAM

Section 2 is the biggest. Product recognition matters, but every question still turns on a business need.

An exam in the middle of a rename

- **Google's banner:** "This exam was recently updated to reflect branding changes."
- **Vertex AI** became **Gemini Enterprise Agent Platform** in April 2026.
- **NotebookLM** became **Gemini Notebook**; **Agentspace** became **Gemini Enterprise**.
- **Imagen** shut down in August 2026; the guide still names it.
- **The rule:** answer with the name the question uses, and recognise both.

> CURRENCY CHECK
>
> Module 1 maps every name, and module 28 drills every change before the practice exams.

Original questions, Google's own documentation

- **Every question is original.** None is copied from a question bank or dump.
- **Every explanation** comes from Google's documentation, checked in October 2026.
- **Time follows the exam guide's weights,** not what is easiest to teach.
- **186 worked scenarios** inside the modules, plus **60 practice-exam questions**.
- **Currency checks** flag where today's products differ from the guide.

> THE TAKEAWAY
>
> Dumps train you to recognise questions. This course trains the decision behind them.

Meet Wrenfield Home

- **A fictional UK homeware and furniture retailer,** based in Leeds.
- **118 stores, 9,200 staff,** a contact centre in Sheffield and a store-card business.
- **48,000 products** online, and a Dutch website launching in 2027.
- **Sixteen planted problems,** each one a decision the exam tests.
- **One company throughout,** so each new idea lands on something familiar.

> REMEMBER
>
> Wrenfield is invented. Any resemblance to a real company is accidental.

Start here, then the fundamentals

MODULE	LENGTH
01 The Gen AI Leader map	17 min
02 The vocabulary of AI	14 min
03 How machines learn	14 min
04 Data and its quality	13 min
05 Inside a foundation model	14 min
06 The ML lifecycle	13 min
07 The gen AI landscape	12 min

Models, then Google Cloud's offerings

MODULE	LENGTH
08 Google's foundation models	17 min
09 Choosing a model, and when not to use gen AI	19 min
10 Why Google Cloud	16 min
11 Gemini for everyone	15 min
12 Gemini Notebook and Gemini Enterprise	14 min
13 Search that answers	13 min
14 The Customer Engagement Suite	14 min

Builders, agents, and better output

MODULE	LENGTH
15 Agent Platform for builders	15 min
16 What an agent is	16 min
17 Agent tools and pre-trained APIs	17 min
18 The newest layer	14 min
19 Where models fail	14 min
20 Prompt engineering	15 min
21 Grounding and RAG	15 min

Running it well, and leading it

MODULE	LENGTH
22 Sampling parameters and safety settings	12 min
23 Keeping gen AI healthy in production	14 min
24 Choosing gen AI use cases	12 min
25 Leading adoption	13 min
26 Secure AI	14 min
27 Responsible AI	13 min

The run-in to the exam

MODULE	LENGTH
28 What changed	11 min
29 Confusion pairs	13 min
30 How questions are written	10 min
31 Practice exam 1	23 min
32 Practice exam 2	23 min
33 Practice exam 3	23 min

ON THE EXAM

Modules 28 to 30 teach no new products. They turn what you know into marks.

How every teaching module works

01
Teach
One idea per slide, from Google's documentation.

02
Scenario
A situation, a question and four options.

03
Commit
Choose a letter before the answer appears.

04
Worked
Why the right option fits, and why each wrong one fails.

05
Five lines
The module, compressed for revision.

REMEMBER

The callout bar at the bottom of a slide holds its takeaway. If you only remember one thing, remember that.

Answer **before** the solution appears. Watching without committing teaches almost nothing.

From first module to booking the exam

01
Watch
Modules 01 to 30, in order, answering every scenario.

02
Paper 1
Score it by section.

03
Rewatch
Only the weakest section.

04
Papers 2 and 3
A day or more apart.

05
Book
When every section is at target.

THE TIEBREAKER

Rewatching what you already know feels productive because the scores stay high. It moves nothing.

A faster route, and how to use the chapters

- **Fast route:** module 01, then modules 28 to 30, then paper 1.
- **Let paper 1 choose** which sections to watch in full.
- **Use the chapters** to jump straight to any module.
- **Each module stands alone,** with its own scenarios and five-line summary.
- **Already experienced?** Still sit all three papers. They find gaps you did not know about.

> THE TIEBREAKER
>
> The fast route saves time, but the full route is what the scores in the papers are calibrated for.

Before module 1

- **Keep a sheet of paper** for scenario answers and paper scores.
- **Commit to every answer,** then read the worked solution.
- **Answer with the question's names,** and recognise both old and new.
- **Read the qualifier** in every question: it usually decides the answer.

> REMEMBER
>
> Next: module 1, the Gen AI Leader map, and the 2026 names.
