MODULE 29 · EXAM STRATEGY - ALL SECTIONS

Confusion pairs: one detail flips the answer

The look-alike choices that cost the most marks, a rapid round for each section, and ten scenarios where changing one detail changes the answer.

COVERS All four sections SCENARIOS 10 MODULE 29 of 33

admin@sthithapragna.com

Most wrong options are **right answers to a slightly different question**. Find the detail that makes the difference.

admin@sthithapragna.com

Fundamentals look-alikes

IF THE QUESTION SAYS	CHOOSE
"Examples labelled with the right answer"	Supervised learning
"Find groups; there are no labels"	Unsupervised learning
"Learns by trial, error and reward"	Reinforcement learning
"An open model we run ourselves"	Gemma
"Video clips from a text prompt"	Veo
"Track versions of our trained model"	Model Registry

THE TIEBREAKER

Look at the data and the output first. The learning type, model or tool follows from them.

Offerings look-alikes

IF THE QUESTION SAYS	CHOOSE
"Inside the email or document I have open"	Gemini in Workspace
"Search all company systems, with permissions"	Gemini Enterprise
"Answers only from sources I add"	Gemini Notebook
"Help the human agent during the call"	Agent Assist
"Named fields from invoices and forms"	Document AI
"Quick prototype with an API key"	Google AI Studio

THE TIEBREAKER

Ask where the work happens, whose data it touches, and who is being helped.

Techniques look-alikes

IF THE QUESTION SAYS	CHOOSE
"Facts are missing or out of date"	Grounding or RAG
"A style that prompts cannot hold"	Fine-tuning
"Several examples to copy"	Few-shot prompting
"Reason, call tools, observe, repeat"	ReAct
"Same question, different wording"	Lower temperature
"Quality slips a little each month"	Drift

THE TIEBREAKER

Ask whether the problem is knowledge, behaviour, settings, or a world that has moved.

Strategy look-alikes

IF THE QUESTION SAYS	CHOOSE
"Framework for securing AI systems"	SAIF
"Google's commitments for building AI"	AI Principles
"Screen prompts for injection"	Model Armor
"A key can re-identify people"	Pseudonymised
"Routine, high volume, rule-bound"	Automate
"Judgement and high stakes"	Augment, people decide
"Ideas from the teams who do the work"	Bottom-up, with top-down support

THE TIEBREAKER

Ask whether the question is about security, responsibility, or leading people.

admin@sthithapragna.com

> A Wrenfield area manager has the long shift-handover document open in Google Docs.
>
> She wants it rewritten as a short, clear version for store teams, without copying it anywhere.

Which tool fits best?

A Gemini in Docs

B Gemini Enterprise

C The Gemini app, with the text pasted in

D Gemini Notebook

◆ PAUSE AND DECIDE

Which tool fits best?

A Gemini in Docs

Works on the open document, in place.

B Gemini Enterprise

For searching across company systems.

C The Gemini app, with the text pasted in

Works, but means copying the text out.

D Gemini Notebook

For answers from a set of sources.

ONE DETAIL FLIPS IT

The work sits in the open document: Workspace. Many systems: Enterprise. Blank page: the app.

> A Wrenfield buyer writes many supplier emails, and wants every one in the company tone of voice.
>
> She wants to attach the style guide once, and reuse the same assistant every day.

Which option fits best?

A Gemini Notebook, with the style guide as a source

B A Gem with her instructions and the style guide

C Deep Research

D Gemini Enterprise

◆ PAUSE AND DECIDE

Which option fits best?

A Gemini Notebook, with the style guide as a source

Answers questions from sources; it is not a reusable writer.

B A Gem with her instructions and the style guide

Saved instructions plus a file, reused every time.

C Deep Research

Researches the web; it does not hold a brief.

D Gemini Enterprise

Company-wide search, more than this needs.

ONE DETAIL FLIPS IT

Reused instructions: a Gem. Answers only from sources, with citations: Gemini Notebook.

> Wrenfield's data team has trained three versions of its delivery-days model.
>
> They need to record which version is in production, its metadata, and its evaluation results.

Which tool fits best?

A Model Garden

B AutoML

C Model Registry

D Feature Store

◆ PAUSE AND DECIDE

admin@sthithapragna.com

Which tool fits best?

A Model Garden
A catalogue of models to start from.

B AutoML
Trains a model without code.

C Model Registry
Versions, metadata and status of your own models.

D Feature Store
Keeps features consistent, not model versions.

ONE DETAIL FLIPS IT

Track your own model versions: Registry. Find a model to start from: Garden. Train without code: AutoML.

> An exam question describes giving an agent a collection of product manuals.
>
> The agent must answer accurately from the latest versions, which change every month.

Which tool type fits best?

A Extensions

B Functions

C Plugins

D Data stores

◆ PAUSE AND DECIDE

Which tool type fits best?

A Extensions

The agent calls an external API itself.

B Functions

Your app runs a call the model proposes.

C Plugins

Packaged add-on capabilities.

D Data stores

Fresh content the agent answers from.

ONE DETAIL FLIPS IT

Content to answer from: data store. Your app runs the action: function. The agent calls an API itself: extension.

> Wrenfield's copy assistant already receives every product fact in its prompt.
>
> Its descriptions vary in layout and tone, and the team has not yet tried giving it examples.

What should the team try first?

A Add a few approved descriptions as examples

B RAG over the product catalogue

C Fine-tune on approved descriptions

D Switch to the largest model

◆ PAUSE AND DECIDE

What should the team try first?

A. Add a few approved descriptions as examples
The cheapest fix not yet tried.

B. RAG over the product catalogue
Fixes missing facts; the facts are fine.

C. Fine-tune on approved descriptions
Possible later, but skips the cheap fix.

D. Switch to the largest model
Costlier, and does not target the cause.

ONE DETAIL FLIPS IT

Untried examples: few-shot. Missing facts: RAG. Prompts tried and failed, with many examples: fine-tune.

> Wrenfield's stock agent must check whether a sofa is in stock online.
>
> If not, it checks the three nearest stores, then decides what to offer the customer, step by step.

Which approach fits best?

A Chain-of-thought prompting

B ReAct

C Few-shot prompting

D Role prompting

◆ PAUSE AND DECIDE

Which approach fits best?

A Chain-of-thought prompting

Reasons, but cannot look anything up.

B ReAct

Reasons, calls tools, observes the result, repeats.

C Few-shot prompting

Examples do not perform lookups.

D Role prompting

A persona does not perform lookups.

ONE DETAIL FLIPS IT

Reasoning plus tool calls: ReAct. Reasoning alone, from the prompt: chain-of-thought.

> Wrenfield's slogan generator produces accurate slogans for the autumn range.
>
> But they are bland, and almost the same each time.

Which change helps most?

A Ground it in the product catalogue

B Lower the temperature

C Raise the temperature

D Raise max output tokens

◆ PAUSE AND DECIDE

Which change helps most?

A Ground it in the product catalogue
The facts are already accurate.

B Lower the temperature
Makes them even more alike.

C Raise the temperature
Gives less likely, fresher words a chance.

D Raise max output tokens
Longer slogans, not fresher ones.

ONE DETAIL FLIPS IT

Bland and repetitive: raise temperature. Wrong facts: ground it. Cut off: raise max output tokens.

> Over nine months, the quality of Wrenfield's support agent has slipped a little each month.
>
> The model version is pinned, nothing has been deployed, and Wrenfield has added two new product lines.

What is the most likely explanation?

A An auto-updated model alias

B A security breach

C Temperature set too high

D Drift: the world has moved on

◆ PAUSE AND DECIDE

What is the most likely explanation?

A An auto-updated model alias

The version is pinned, and an alias change is sudden.

B A security breach

Nothing suggests an attack.

C Temperature set too high

Settings have not changed.

D Drift: the world has moved on

A slow decline as products and questions change.

ONE DETAIL FLIPS IT

Slow decline, nothing changed in the system: drift. Overnight change on an alias: the model was swapped.

> Wrenfield's board asks for Google's published commitments on how AI should be built and used.
>
> They want to see human oversight, avoiding unfair bias, and privacy covered.

Which should the leader point to?

A Google's AI Principles

B The Secure AI Framework, SAIF

C Model Armor

D Security Command Center

◆ PAUSE AND DECIDE

Which should the leader point to?

A **Google's AI Principles**
Google's commitments on responsible AI.

B **The Secure AI Framework, SAIF**
A framework for securing AI, not values.

C **Model Armor**
A screening tool, not a set of commitments.

D **Security Command Center**
A security dashboard, not commitments.

ONE DETAIL FLIPS IT

Commitments on responsible AI: the AI Principles. Securing AI systems: SAIF.

> Wrenfield shares complaint statistics with a university researcher.
>
> Names and contact details were removed, records were grouped by region and month, and no key exists anywhere to re-link them.

How should the data be classified?

A Pseudonymised

B Anonymised

C Encrypted

D Synthetic

◆ PAUSE AND DECIDE

How should the data be classified?

A Pseudonymised

Only if a key could re-identify people.

B Anonymised

No way back to any person.

C Encrypted

No encryption is described.

D Synthetic

Real complaints, grouped, not invented.

ONE DETAIL FLIPS IT

No way back to a person: anonymised. A key that can re-link: pseudonymised.

The details that flip answers

LOOK FOR	IT DECIDES BETWEEN
Where the work happens	Workspace, the Gemini app or Enterprise
Whose data, or whose facts	First-party, third-party or world data
Who is helped, and when	Self-service, live help or analysis
Knowledge or behaviour	RAG or fine-tuning
Sudden or slow	A system change or drift
Secure or responsible	SAIF or the AI Principles

THE TAKEAWAY

Underline the deciding detail before you read the options. Then the look-alikes stop looking alike.

admin@sthithapragna.com

Module 29 in five lines

- Most wrong options are right answers to a slightly different question.
- Find the one detail that decides, before reading the options.
- Section 2: where the work happens, whose data, who is helped.
- Section 3: knowledge, behaviour, settings, or a world that moved.
- Section 4: security, responsibility, or leading people.
